MEMO – Torus Review
SUBJECT – Torus RM 20 and RM 10 Review

Hi James,

Just wanted to let you know that I have been enjoying my 4BSST2 and 6BSST2 along with the Torus RM-20 and RM-10.

I had a chance to test the Shunyata Vray against the Torus.

First test, I plugged the amps into the RM-20 and my front end components in to Shuyata. Nice, better than just the Shunyata with the front end. Though the Torus only had about 50 hours burn in time, it was still somewhat congested.

I then left the amps in the RM-20, and plugged the front end components into the RM-10. The RM-10 had 0 hrs burn in. Immediately, the system opened up, more than I expected. Flipped back and forth with the front end on the Shunyata and Torus. No contest, Shunyata is going up for sale.

Since then my system has opened up more (less congested). I find I do not have to turn the volume up as high, as I did at the beginning.

I am very happy with this configuration.

Thanks

Alan
