# New Accessory Provides Mounting for Torus Box-Style Units

Torus Power introduces three new Mounting Rail Kits for its Box-Style Power Isolation Units (PIUs) to facilitate various fixed mounting configurations, such as behind a plasma display, or near a ceiling-mounted projector. These new accessories allow the stand-alone PIUs to be mounted to any flat surface. The kits each consist of two Z-shaped rails. The Mounting Rails are attached to the unit by removing the standard equipment feet and, using the same hardware, the rails are fixed in-place. The unit then is mounted to a wall, ceiling or other surface with appropriate mounting screws through 4 or 6 holes in the two rails.

Mounting Rails are constructed of sturdy 16 gauge steel and are the same black powder coat finish as Torus chassis.

Torus Box-Style units are available in North American and International versions. North American ratings are 120VAC at 10A, 5A and 2.5A; International ratings are 230/240VAC at 4A, 2A and 1A. Other Torus units are available up to 100A.

Torus PIUs combine series-mode surge suppression with unique toroidal transformer technologies to provide the ultimate in AC power conditioning and protection for sensitive audio and video equipment applications.

Mounting Rail Kit for Torus Single 2.5A or International 1A

P/N PA-10067-00...US List \$56.95

Mounting Rail Kit for Torus Single 5A or International 2A

P/N PA-10066-00...US List \$58.35

Mounting Rail Kit for Torus Single 10A or International 4A

P/N PA-10065-00...US List \$63.65
