Bryston introduces Torus Power units at AES Finally a Power Line Conditioner from a Company who Knows Power

Bryston has signed an agreement to market, worldwide, Torus Power power conditioning products for use in audio and video applications. A massive flagship 12,000VA unit will be displayed for the first time at the Bryston booth during the 119th Audio Engineering Society Show in New York.

The impetus for Torus Power products' development was Bryston's long-standing position that its amplifiers would be starved of input current with available power conditioners. The benefits of noise reduction were outweighed by the constricted power of most conditioners on the market.

Torus Power addresses those concerns with a line of products that are based on fully-isolated high-power transformers with the best surge suppression available, packaged in either NEMA or rack-mount enclosures. Balanced two-phase inputs and series-mode surge protection provide high power and noise-reduction with equipment protection that does not contaminate ground reference in audio and video signals.

Estimated MSRP \$2500 - \$9000 US.
